Abstract

Disaster Alert Village research conducted in Munjul Subdistrict, Pandeglang Regency, Banten Province, obtained some information that Munjul Subdistrict is a Ciliman river basin which empties into Labuhan Beach. The Ciliman River is a large river which routinely overflows when there is high rainfall. Last February 2017, the Ciliman River overflowed and there were floods in 7 (seven) subdistricts in Pandeglang Regency, including in Munjul District. Anticipation of facing flooding problems that often occur at the location of this study, the local government through the Banten Provincial Social Service established a social organization that is alert to flood emergency response conditions as the Campaign for Disaster Preparedness (KSB). The aim of the study was to find out about people with social welfare problems (PMKS) and potential social welfare sources (PSKS). The research method uses a qualitative descriptive approach which is trying to obtain a better understanding of the conditions of the research location which are prone to natural floods, especially in the rainy season. The acquisition of field data provided data and information that the neglected elderly PMKS is the largest number in Pandeglang District, and this information illustrates that a large number of people over the age of 60 and living in deprivation. The next number of PMKS which is quite striking are persons with disabilities and women who are socially and economically vulnerable. Potential and Sources of Social Welfare (PSKS) at the location of the researchers looked quite varied in data. Social workers are very dominant in their existence, then there are two PSKS who also look quite potential in the district, namely PKH facilitators and their operators.
